

Cold cutting process, no heat distortion, edge hardening or heating effected zones

Clean cutting with no contamination

No restriction on the hole sizes

High accuracy

Only 2mm spacing between nested parts for best material utilization

No restriction on cutting polished or reflective materials

Virtually no restriction of type of material

Reduces or eliminates secondary cleaning operations

No tool costs

Intricate designs are easily created

All machining undertaken within a single set up

Cut width of only 1.2mm for minimal material loss
